BULFORD DOLPHIN NIGERIAN OPERATIONS – SECURITY REQUIREMENTS

Stage 1

Security boat (M/V Tropical Sun or equivalent) will observe all activity around the rig at all times. Security boat will establish and maintain communications with the rig. Security Boat will remain in close standby to the rig at all times, at a distance to be determined by rig OIM (e.g. 1 mile during daylight, 500 metres during darkness). If there is any activity, or other vessels come inside 5 mile ("Safety Zone"), the Security Boat will notify the rig immediately.

Stage 2

If any activity or vessels approach within 3 miles of the rig and are considered to be a potential threat, the Security Boat will immediately notify the rig. The rig will prepare to cease operations giving due consideration for current activity and go to "watch keeping" status. The OIM will notify Dolphin shore base office and the Client.

Stage 3

Only one boat can go inshore (e.g. for re-fuelling, crew change or food) at any one time; a minimum of one boat must remain with the rig at all times. Boats going inshore must be done in daylight (as far as possible), and must be authorized by the rig OIM (Captain).

Stage 4

If the Security Boat has to go inshore (e.g. for re-fuelling etc), the Supply Boat will take over duty as Security Boat and remain in close standby until the Security Boat returns. The relevant vessel Captains to communicate, including the rig OIM, with regards location of the Security personnel during this time.

Stage 5

In the event operations cease as a result of Stage 2 or non availability of vessels are described in Stage 3 and Stage 4 Standby Rate shall apply.
